Hobbies and Interests

Administrator Yang

September 21, 2025

1 Beginning

Everyone has a variety of hobbies and interests. Some love badminton and enjoy the thrill of smashing a powerful shot; some are passionate about cycling, experiencing speed and excitement on the road; others are devoted to science, eager to explore new knowledge and expand their horizons. As for me, I am deeply passionate about information technology, especially programming.

2 History

I was first introduced to programming on September 1, 2023, when I started learning Scratch. Later, in September 2024, during my first IT lab class, I encountered the C++ language. Since then, I've learned about loops, if-else conditional statements, generating random numbers, and eventually moved away from `using namespace std`. I also discovered GitHub and, through conversations with AI, was introduced to LaTeX. My first open-source project was a book report written in LaTeX: <https://github.com/gcc-404-NOT-FOUND/Red-Star-over-China>.

3 Why do I love

Throughout my learning journey, I've adhered to the principle: If I can't afford it or it's not available, I'll make it myself. I often spend at least three hours in one sitting while coding. I truly enjoy the sense of control over how the code runs and the output it produces. Every time I update my code, I feel a great sense of accomplishment. Next, please enjoy a video I edited myself: [the song *Wasted*, dedicated to everyone who loves programming](#).

4 Ending

In summary, programming is the only hobby I've consistently pursued for over a year. I'm currently learning C++, LaTeX, and Python. If you also enjoy programming, feel free to chat with me! You can also follow my GitHub account: <https://github.com/gcc-404-NOT-FOUND>.
